

Open Issues:

- It is not possible to have 2 or more groups with the same name, this problem will be fixed in the future by identifying groups via their database id. With this change comes the issue that we can not assign the database id to a group that is created without having an internet connection at this moment, so in order to fix this problem we either have to disable offline group creation or give the group a temporary id that is later on replaced with the database id.
- Login/Sign up does not work on emulator

Missing Features:

- Item tab: the tab where the category of items and the order of the categories can be changed
- Recipe feature
- Serverside group feature (invites, accessing a shopping list as a group)
- Settings
- Icons for items
