Open Issues:
- when a list is altered be two or more users at a the same time, merge conflicts can happen (for example adding an item while an other user is spamming the checkbox and ticking the item), this conflict only appears client side
- Reloading changes of groups can be slow
- The loading Circle is not displayed when using older android versions

Missing Features:
- groups and lists cannot be renamed
- the user cannot upload own icons for his items
- recipes cannot be shared
